

Relieves Pain Through the Autonomic Nervous System

Zhongguo Zhen Jiu. 2008 Sep; 28(9):662-4

One question that often comes up concerns the safety of laser therapy with infants. Here we see the value of light therapy treating infants with the colds and flu. In this hospital based study, 255 babies suffering from colds and upper respiratory symptoms were exposed to either laser therapy or Amantadine, a common medication for colds and flu. The study demonstrated that 69% of the laser group that received treatment to acupoints and 42% of the medication group achieved objective benefit. The benefit of laser therapy above medication was significant
